SUBJECT INDEX, VOLUME 13

Herbicides and weeds are indexed only under common names (Weeds 12:328–332) where such designations have been established. Where they have not been established, the chemical name of the herbicide is used and the Latin name of the weed is given. Numbers in names and such indicators as *s*, *sec*, C^{14}, etc., are ignored in indexing. This is changed from some earlier indexes, but is being done to conform with the practice of Chemical Abstracts.
